

Fixing unable to download any exe files using Internet Options

Your Internet Options may be stopping your .exe file from being able to be downloaded. Here is a fix. Take note of all settings before you change them in case you want to revert after download.

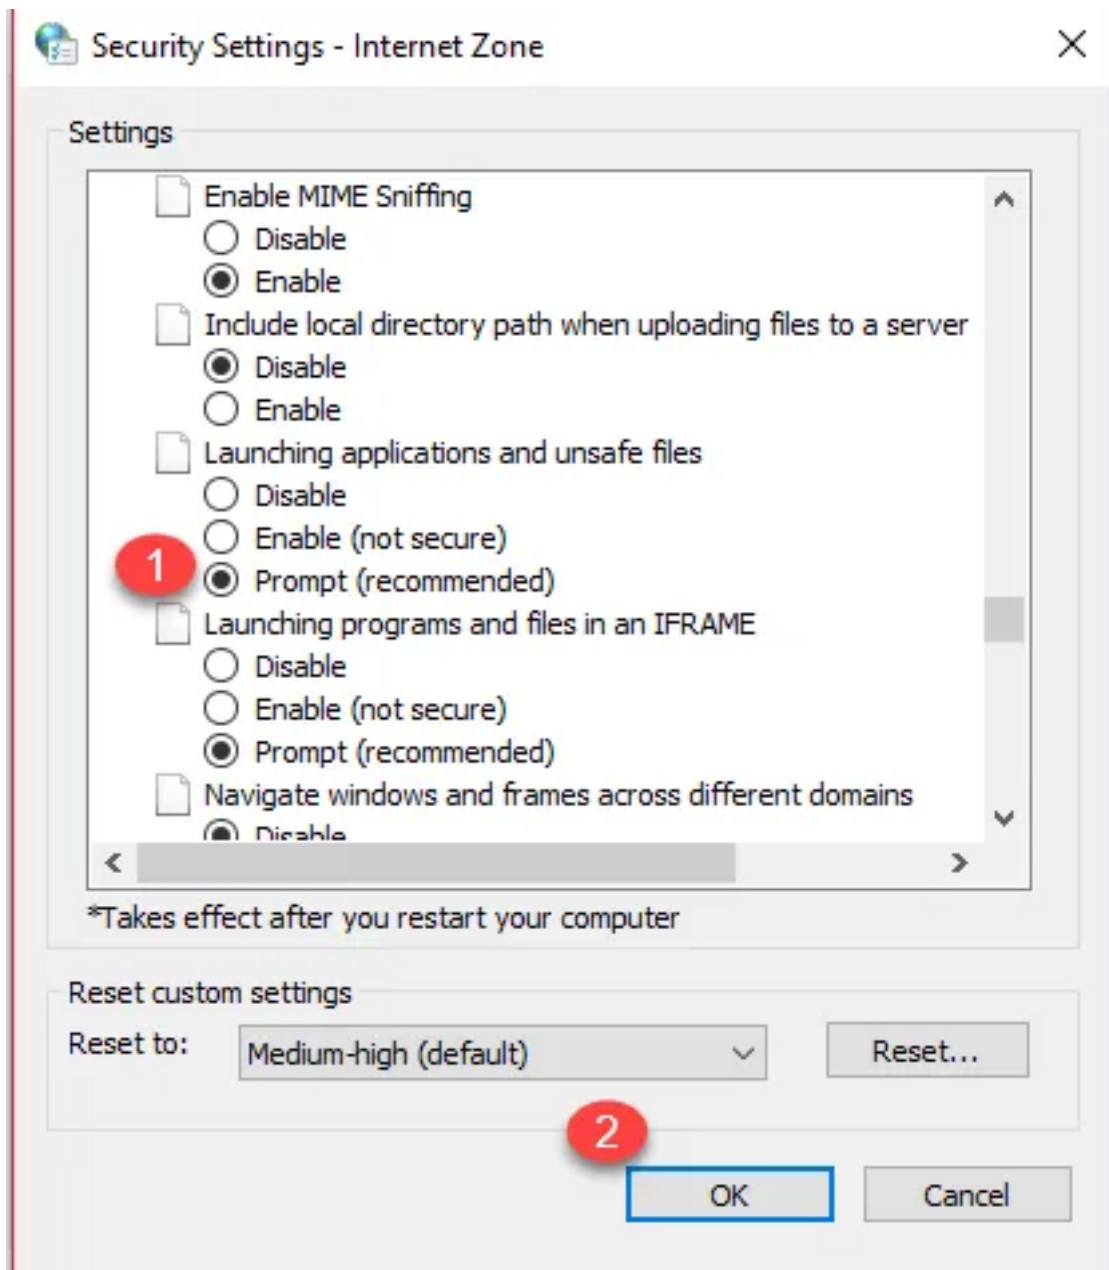

1. Type *Internet Options* in the Start Menu and open the first result you get.
2. Go to *Security tab*, in Internet Options window and select *Custom Level*.

3. A new window will open.
Look for *Downloads*, expand it further
and enable *File Download* and *Font Download*.

4. Scroll below to look for another option
Launching applications and unsafe files
and select the *Prompt* option for it.

5.

6. Press *Apply and OK*. Close all open windows.

NOTE: You may want to undo these changes after downloading your file.
